Medlemsmøte 2007-12-11: Accessibility with Open Source and Free Software

Norwegian Unix User Group (NUUG) inviterer til medlemsmøte i NUUG Oslo. Alle medlemmer og ikke-medlemmer er velkomne. Arrangementet er gratis. Etter foredraget (fra ca. 20:30) blir det sosialt samvær.

Tid:	Tirsdag 11. desember 2007 kl. 18:30
Sted:	Høgskolen i Oslo, Pilestredet 35.

Månedens tema er «Accessibility with Open Source and Free Software» med Adriane og Klaus Knopper:

> Making information access "accessible" is not as easy as it is sometimes advertised by software vendors, taking into account the various different capabilities and possibilities of users with and without disabilities, and even for the "average" computer user, finding information on the web and even on his/her own harddisk can become a difficult job. This presentation provides some hands-on examples of desktop and application helpers which are suitable to give, not only but also, blind and vision-impaired computer users an unfamiliar comfortable access to information resources and communication devices, and also explains some of the concepts behind desktop accessibility on the technical side.

Adriane Knopper, married to Klaus Knopper and mother of two children, is responsible for accessibility and ease-of-use issues at Knopper.Net consulting, especially in the area of software-alphatests and usability improvement.

Dipl.-Ing. Klaus Knopper, known best for his live system "KNOPPIX", holds a master's degree in electrical engineering and works as freelance IT-consultant and developer of specialized Open Source software solutions.

Vel møtt!
Mvh, aktive@nuug.no
