Medlemsmøte i NUUG 2008-01-22:

Introducing OpenID

Norwegian Unix User Group (NUUG) inviterer til medlemsmøte i NUUG Oslo. Alle medlemmer og ikke-medlemmer er velkomne. Arrangementet er gratis. Etter foredraget (fra ca. 20:30) blir det sosialt samvær.

Tid: Tirsdag 22. januar 2008 kl. 18:30
Sted: Høgskolen i Oslo, Pilestredet 35.

Presentasjonen starter presis, og dørene inn til auditoriet er låst, så det er lurt å ankomme før 18:30 mens det er folk i døra til å slippe deltagerne inn.

Månedens tema er «Introducing OpenID» med Simon Josefsson:

This talk explains what OpenID is, and what it can do for you. We'll demonstrate OpenID in a live demo using an hardware authentication token from Yubico for improved security. OpenID is an open architecture for web-based user authentication. One of its advantages are that it will help you as a web designer to avoid the hassles of maintaining your own username/password database, with the associated security problems that brings. The advantage for you as user is that you can reduce the number of username/password combinations that you will have to remember. The presentation will focus on the usability advantages, and only touches on other OpenID features and the cryptographic underpinnings.

Simon Josefsson works as an independent consultant on free security software. He maintains the GNU implementations of the TLS, Kerberos and SASL protocols. He participates in the IETF process to standardize future extensions.

Inngangen til høyskolen er ved trikkeholdeplassen Holbergs plass.

Vel møtt!
Mvh, aktive@nuug.no
