
Medlemsmøte i NUUG 2004-09-23:

Patent, Copyright, DRM, and Licenses in the New World of Free and Open Source Software

NUUG og Elektronisk Forpost Norge inviterer til medlemsmøte i NUUG Oslo torsdag 23. september 2004 kl. 18:30 på Høgskolen i Oslo, HiO, - Vika, Cort Adelersgt. 30. Inngangen er 15 meter fra trikkeholdeplassen Vikatorvet. Skolen har egen parkeringsplass mellom skolen og Ruseløkka skole, men det er svært begrenset plass på denne. Etter foredraget (fra ca. 20:30) blir det sosialt samvær. Medlemsmøtet vil foregå på engelsk.

Scott Collins will examine the balance between exploration in- and exploitation of-invention: how both creator and community can share the benefits from works of software engineering, composition, music, and other arts. Current approaches will be weighed against proposals from both extremes, and more moderate positions. The presentation will cover other reasonable motivations behind current copyright and patent law, the good, the bad, and how we might fix what we have to work for everyone, including software engineers.

Scott Collins is an engineer, public speaker, technical evangelist, and a key participant and contributor to the Mozilla project since its inception. He is a popular speaker around the globe on topics from the technical to the historical, social, and political.
